

HYTEK™

Steel is one of the world's **strongest** and **most durable** materials, making it ideal for residential building. With its **precision** and incredible strength-to-weight ratio the Hytek steel framing system is the **best solution for the modern home.**

Whether you are looking for a residential building, workshop or other type of structure we have the solution for you. We can handle any commercial or industrial building, all designed to **your specifications and engineering requirements.**

The Hytek Frame Solution allows us to fully **customise** a design for all your steel framing needs. We will work with you to design a structure to suit your specific building processes and construction requirements within the agreed **time frame – guaranteed.**

Using the Hytek technology, each piece of steel is cut to the exact size ensuring complete accuracy. All components are manufactured to the highest standard possible using state of the art equipment and the best quality material. We guarantee dimensionally correct frames within +/- 1mm of your design specifications, which result in you the customer **saving costs in both labour and materials.**

Hytek is proud to be associated with Textor Metal Industries, an industry leader with over 50 years experience in the building and construction industry. Established in 1963.
